Experience

Lead Full-Stack Engineer

Dec 2025 - Present

Reliq (Co-Founder/Startup)

COBOL modernization platform for banks and financial institutions. Translates legacy COBOL codebases to Python or Java.

- Built a responsive React/TypeScript SPA using Vite and Zustand, featuring complex interactive data visualizations and node-based graphs utilizing Recharts and ReactFlow.
- Architected a scalable Python/FastAPI backend with PostgreSQL, leveraging Redis and Celery for async task queuing to handle high-throughput pipelines and real-time updates.
- Implemented JWT authentication, RBAC, and CSRF protection, hardening the API with custom APM middleware, rate limiting, and payload validation for enterprise reliability.
- Containerized the full stack with Docker and built automated CI/CD pipelines via GitHub Actions, establishing >90% test coverage using Pytest, and Playwright.
